2019

Reduction of fibrillar strain-rate sensitivity in steroid-induced osteoporosis linked to changes in mineralized fibrillar nanostructure.

Matrix-induced pre-strain and mineralization-dependent interfibrillar shear transfer enable 3D fibrillar deformation in a biogenic armour.

Proteoglycan degradation mimics static compression by altering the natural gradients in fibrillar organisation in cartilage.

2018

Bone matrix development in steroid-induced osteoporosis is associated with a consistently reduced fibrillar stiffness linked to altered bone mineral quality.

Multilayer stag beetle elytra perform better under external loading via non-symmetric bending properties.

Unlocking the secrets of mutable collagenous tissue.

2017

The Secret Life of Collagen: Temporal Changes in Nanoscale Fibrillar Pre-Strain and Molecular Organization During Physiological Loading of Cartilage.

Towards in situ determination of 3D strain and reorientation in the interpenetrating nanofibre networks of cuticle.

Body wall structure in the starfish Asterias rubens.

Staggered Fibrils and Damageable Interfaces Lead Concurrently and Independently to Hysteretic Energy Absorption and Inhomogeneous Strain Fields in Cyclically Loaded Antler Bone.
Structural building blocks of soft tissues: Tendons and heart valves.  
Gupta HS and Screen HRC. *Cism International Centre For Mechanical Sciences, Courses and Lectures.*

2016

Interfibrillar stiffening of echinoderm mutable collagenous tissue demonstrated at the nanoscale.  

Uncovering three-dimensional gradients in fibrillar orientation in an impact-resistant biological armour.  

Multiscale alterations in bone matrix quality increased fragility in steroid induced osteoporosis.  

2015

Naturally inspired polyelectrolyte multilayer composite films synthesised through layer-by-layer assembly and chemically infiltrated with CaCO3.  

Integrative and comparative analysis of coiled-coil based marine snail egg cases - A model for biomimetic elastomers.  

2014

Nanointerfacial strength between non-collagenous protein and collagen fibrils in antler bone.  

Intrafibrillar plasticity through mineral/collagen sliding is the dominant mechanism for the extreme toughness of antler bone.  

Symmetrically reduced stiffness and increased extensibility in compression and tension at the mineralized fibrillar level in rachitic bone.  

Synchrotron X-ray nanomechanical imaging of mineralized fiber composites.  

2012

Pseudoelastic behaviour of a natural material is achieved via reversible changes in protein backbone conformation.  

Hypophosphatemic rickets is associated with disruption of mineral orientation at the nanoscale in the flat scapula bones of rachitic mice with development.  
Recording IR spectra for individual electrospun fibers using an in situ AFM-synchrotron technique.

Strain transfer through the aortic valve.

Significant deterioration in nanomechanical quality occurs through incomplete extrafibrillar mineralization in rachitic bone: Evidence from in-situ synchrotron X-ray scattering and backscattered electron imaging.

Accelerated growth plate mineralization and foreshortened proximal limb bones in fetuin-A knockout mice.

2011

Extrafibrillar diffusion and intrafibrillar swelling at the nanoscale are associated with stress relaxation in the soft collagenous matrix tissue of tendons.

Deformation and fracture mechanisms of bone and nacre.

Synchrotron 3D SAXS analysis of bone nanostructure.

2010

In situ multi-level analysis of viscoelastic deformation mechanisms in tendon collagen.

2009

Rational synthesis of a nanocrystalline calcium phosphate cement exhibiting rapid conversion to hydroxyapatite.

Collagen insulated from tensile damage by domains that unfold reversibly: In situ X-ray investigation of mechanical yield and damage repair in the mussel byssus.

Inhomogeneous fibril stretching in antler starts after macroscopic yielding: Indication for a nanoscale toughening mechanism.

Nanomedicine.

Nanoscale deformation mechanisms in bone.

Digital image correlation shows localized deformation bands in inelastic loading of fibrolamellar bone.
An Effective Morphology Control of Hydroxyapatite Crystals via Hydrothermal Synthesis.
Neira IS, Kolen'ko YV, Lebedev OI, Van Tendeloo G, Gupta HS, Guitian F and Yoshimura M. *Cryst Growth Des* vol. 9, (1) 466-474.

2008

Nanoscale deformation mechanisms in collagen.
Gupta HS.

Fracture of bone tissue: The 'hows' and the 'whys'.
Gupta HS and Zioupos P. *Medical Engineering and Physics* vol. 30, (10) 1209-1226.

Tough lessons from bone: Extreme mechanical anisotropy at the mesoscale.

Collagen: Structure and Mechanics.
Gupta HS. *Collagen*. Fratzl P. *Springer Verlag*.

Nanoscale Mechanisms of Bone Deformation and Fracture.
Fratzl P and Gupta HS.

2007

Hindered crack propagation in materials with periodically varying young's modulus - Lessons from biological materials.
Fratzl P, Gupta HS, Fischer FD and Kolednik O. *Advanced Materials* vol. 19, (18) 2657-2661.

Raman imaging of two orthogonal planes within cortical bone.
Kazanci M, Wagner HD, Manjubala NI, Gupta HS, Paschalis E, Roschger P and Fratzl P. *Bone* vol. 41, (3) 456-461.

Evidence for an elementary process in bone plasticity with an activation enthalpy of 1 eV.

Scanning X-ray imaging with small-angle scattering contrast.

Scanning texture analysis of lamellar bone using microbeam synchrotron X-ray radiation.

Handbook of Biomineralization: . Biological aspects and structure formation.

2006

Cooperative deformation of mineral and collagen in bone at the nanoscale.

Mechanical modulation at the lamellar level in osteonal bone.

Fibrillar level fracture in bone beyond the yield point.

Spiral twisting of fiber orientation inside bone lamellae.
Wagermaier W, Gupta HS, Gourrier A, Burghammer M, Roschger P and Fratzl P. *Biointerphases* vol. 1, (1) 1-5.
