Recent advances of electrode materials for low-cost sodium-ion batteries towards practical application for grid energy storage.

Nanoporous Materials for the Onboard Storage of Natural Gas.

Carbon Nanodot Solar Cells from Renewable Precursors.

Active sites engineering leads to exceptional ORR and OER bifunctionality in P,N Co-doped graphene frameworks.

Connecting carbon porosity with dispersibility and friability.
Texter J, Zhao L, Xiao PW, Caballero FP, Han BH and Titirici MM. Carbon vol. 112, 117-129.

In Situ Synthesis of Fluorescent Carbon Dots/Polyelectrolyte Nanocomposite Microcapsules with Reduced Permeability and Ultrasound Sensitivity.

Hard Carbon Microtubes Made from Renewable Cotton as High-Performance Anode Material for Sodium-Ion Batteries.

Efficient metal-free N-doped mesoporous carbon catalysts for ORR by a template-free approach.

Understanding the Hydrophobicity and Water Adsorption Behavior of Nanoporous Nitrogen-Doped Carbons.
Kumar KV, Preuss K, Guo ZX and Titirici MM. *Journal of Physical Chemistry C* vol. 120, (32) 18167-18179.

Topological Defects in Metal-Free Nanocarbon for Oxygen Electrocatalysis.

Graphene/nitrogen-doped porous carbon sandwiches for the metal-free oxygen reduction reaction: Conductivity: versus active sites.

Sulphur-doped ordered mesoporous carbon with enhanced electrocatalytic activity for the oxygen reduction reaction.

Fe-N-Doped Carbon Capsules with Outstanding Electrochemical Performance and Stability for the Oxygen Reduction Reaction in Both Acid and Alkaline Conditions.

Activated carbons with high nitrogen content by a combination of hydrothermal carbonization with activation.

Microcellular Electrode Material for Microbial Bioelectrochemical Systems Synthesized by Hydrothermal Carbonization of Biomass Derived Precursors.

Local Platinum Environments in a Solid Analogue of the Molecular Periana Catalyst.

Pileidis FD and Titirici M-M. *Chemsuschem* vol. 9, (6) 652-655.

Levulinic Acid Biorefineries: New Challenges for Efficient Utilization of Biomass.
Pileidis FD and Titirici M-M. *Chemsuschem* vol. 9, (6) 562-582.

Bio-inspired carbon electro-catalysts for the oxygen reduction reaction.

Towards effective small scale microbial fuel cells for energy generation from urine.

The influence of pore size distribution on the oxygen reduction reaction performance in nitrogen doped carbon microspheres.

Porous carbon derived from rice husks as sustainable bioresources: Insights into the role of micro-/mesoporous hierarchy in hosting active species for lithium-sulphur batteries.

Meso- and microporous soft templated hydrothermal carbons for dye removal from water.

Soy protein directed hydrothermal synthesis of porous carbon aerogels for electrocatalytic oxygen reduction.
2015

Versatile Cellulose-Based Carbon Aerogel for the Removal of Both Cationic and Anionic Metal Contaminants from Water.  

Structural and Morphological Changes in Kraft Lignin during Hydrothermal Carbonization.  

Effect of Nitrogen Doping on the CO$_2$ Adsorption Behavior in Nanoporous Carbon Structures: A Molecular Simulation Study.  

Electrochemical behaviour of activated carbons obtained via hydrothermal carbonization.  

Biomass-derived carbon quantum dot sensitizers for solid-state nanostructured solar cells.  

Hydrothermal Carbonization of Biomass.  

Sustainable carbon materials.  

Sevilla M, Yu L, Zhao L, Ania CO and Titirici MM. Acs Sustainable Chemistry and Engineering vol. 3, (4).

Hydrothermal carbonisation (HTC): History, state-of-the-art and chemistry.  

2014

Characterization of biomass and its derived char using 13C-solid state nuclear magnetic resonance.  

Supercapacitive Behavior of Two Glucose-Derived Microporous Carbons: Direct Pyrolysis versus Hydrothermal Carbonization.  
Sevilla M, Yu L, Ania CO and Titirici MM. Chemelectrochem vol. 1, (12) 2138-2145.

Hydrothermal synthesis of microalgae-derived microporous carbons for electrochemical capacitors.  

Always look on the light side of life: sustainable carbon aerogels.  
Carbohydrate-derived nanoarchitectures: On a synergistic effect toward an improved performance in lithium-sulfur batteries.

Biosourced nitrogen-doped microcellular carbon monoliths.
Brun N, Osiceanu P and Titirici MM. Chemsuschem vol. 7, (2) 397-401.

Charging and discharging behavior of solvothermal LiFePO4 cathode material investigated by combined EELS/NEXAFS study.

Carbon aerogels from bacterial nanocellulose as anodes for lithium ion batteries.

Sustainable carbon hybrid materials made by hydrothermal carbonization and their use in energy applications.

Mesoporous graphite nanoflakes via ionothermal carbonization of fructose and their use in dye removal.
Xie ZL, Huang X, Titirici MM and Taubert A. Rsc Advances vol. 4, (70) 37423-37430.

2013

Flexible coral-like carbon nanoarchitectures via a dual block copolymer-latex templating approach.

Hydrothermal synthesis of SnO2 and SnO2@C nanorods and their application as anode materials in lithium-ion batteries.

Tailoring the porosity of chemically activated hydrothermal carbons: Influence of the precursor and hydrothermal carbonization temperature.

Original design of nitrogen-doped carbon aerogels from sustainable precursors: Application as metal-free oxygen reduction catalysts.
Brun N, Wohlgemuth SA, Osiceanu P and Titirici MM. Green Chemistry vol. 15, (9) 2514-2524.

Hydrothermal Nanocarbons.

Synthesis of Microspherical LiFePO4-Carbon Composites for Lithium-Ion Batteries.

Green Nanostructured Carbons.

Hydrothermal nanocasting: Synthesis of hierarchically porous carbon monoliths and their application in lithium-sulfur batteries.

Facile polymer functionalization of hydrothermal-carbonization-derived carbons.

Facile polymer functionalization of hydrothermal-carbonization-derived carbons.
Sustainable Carbon Materials from Hydrothermal Processes.

Hydrothermal conversion of biomass to fuels and energetic materials.

Hydrothermal conversion of biomass to fuels and energetic materials.

Rice husk-derived carbon anodes for lithium ion batteries.

Hydrothermal carbon-based nanostructured hollow spheres as electrode materials for high-power lithium-sulfur batteries.

Emulsion-Templated Macroporous Carbons Synthesized By Hydrothermal Carbonization and their Application for the Enzymatic Oxidation of Glucose.

Hydrothermal carbon-based nanostructured hollow spheres as electrode materials for high-power lithium-sulfur batteries.

Hydrothermal carbons from hemicellulose-derived aqueous hydrolysis products as electrode materials for supercapacitors.
Falco C, Sieben JM, Brun N, Sevilla M, Van Der Mauleen T, Morallón E, Cazorla-Amorós D and Titirici MM. Chemsuschem vol. 6, (2) 374-382.

Direct methane oxidation over Pt-modified nitrogen-doped carbons.

Polypyrrole-derived mesoporous nitrogen-doped carbons with intrinsic catalytic activity in the oxygen reduction reaction.

Production of low-cost adsorbents with tunable surface chemistry by conjuction of hydrothermal carbonization and activity processes.

Emulsion-Templated Macroporous Carbons Synthesized By Hydrothermal Carbonization and their Application for the Enzymatic Oxidation of Glucose.
Brun N, Edembe L, Gounel S, Mano N and Titirici MM. Chemsuschem vol. 6, (4) 701-710.

Hydrothermal nanocasting: Synthesis of hierarchically porous carbon monoliths and their application in lithium-sulfur batteries.

Tailoring the porosity of chemically activated hydrothermal carbons: Influence of the precursor and hydrothermal carbonization temperature.

Hydrothermal synthesis of highly porous carbon monoliths from carbohydrates and phloroglucinol.
Brun N, Garcia-Gonzalez CA, Smirnova I and Titirici MM. Chemsuschem.
2012

High-performance CO2 sorbents from algae.

Carbohydrate-derived hydrothermal carbons: A thorough characterization study.

Borax-mediated formation of carbon aerogels from glucose.

Synthesis of mesoporous carbon/iron carbide hybrids with unusually high surface areas from the ionic liquid precursor [Bmim][FeCl 4].

Hollow carbon nanospheres with superior rate capability for sodium-based batteries.

Carbon-based ionogels: Tuning the properties of the ionic liquid via carbon-ionic liquid interaction.

A one-pot hydrothermal synthesis of sulfur and nitrogen doped carbon aerogels with enhanced electrocatalytic activity in the oxygen reduction reaction.

Black perspectives for a green future: Hydrothermal carbons for environment protection and energy storage.

An improved grafting technique for producing imprinted thin film composite beads.

A one-pot hydrothermal synthesis of tunable dual heteroatom-doped carbon microspheres.

Hollow carbon nanospheres with a high rate capability for lithium-based batteries.

Renewable nitrogen-doped hydrothermal carbons derived from microalgae.

Nitrogen-doped Hydrothermal Carbons.

Thermoresponsive polymers in liquid chromatography.
Tan I, Roohi F and Titirici MM. Analytical Methods vol. 4, (1) 34-43.

2011

Hydrothermal carbon from biomass: Structural differences between hydrothermal and pyrolyzed carbons via 13C solid state NMR.

Ordered carbohydrate-derived porous carbons.
A sustainable synthesis of nitrogen-doped carbon aerogels.

Aqueous nanocarbon dispersions for electronic and energy applications.

Hierarchical porous carbonaceous materials via ionothermal carbonization of carbohydrates.

Structural insights on nitrogen-containing hydrothermal carbon using solid-state magic angle spinning 13C and 15N nuclear magnetic resonance.

LiFePO4 Mesocrystals for lithium-ion batteries.

Hydrothermal carbonization of biomass residuals: A comparative review of the chemistry, processes and applications of wet and dry pyrolysis.

Waterborne nanocarbon dispersions for electronic and fuel applications.
Texter J, Crombez R, Ma XM, Caballero FP, Zhao L, Titirici MM and Antonietti M. Abstracts of Papers of The American Chemical Society vol. 241,.

Morphological and structural differences between glucose, cellulose and lignocellulosic biomass derived hydrothermal carbons.

Hydrothermal carbonization of biomass residuals: a comparative review of the chemistry, processes and applications of wet and dry pyrolysis.

2010

Template synthesis of carbonaceous tubular nanostructures with tunable surface properties.

Solvothermal carbon-doped TiO2 photocatalyst for the enhanced methylene blue degradation under visible light.
Matos J, García A-a a, Zhao L and Titirici MM. Applied Catalysis a: General vol. 390, (1-2) 175-182.

Functional hollow carbon nanospheres by latex templating.

Proteins induced formation of hydrothermal nitrogen doped carbons.

Nitrogen-containing hydrothermal carbons with superior performance in supercapacitors.

Sustainable nitrogen-doped carbonaceous materials from biomass derivatives.

Methane conversion on Pt-Ru nanoparticles alloy supported on hydrothermal carbon.
Matos J, Rosales M, Demir-Cakan R and Titirici MM. Applied Catalysis a: General vol. 386, (1-2) 140-146.
Sustainable nitrogen-doped carbon latexes with high electrical and thermal conductivity.
Zhao L, Crombez R, Caballero FP, Antonietti M, Texter J and Titirici MM. Polymer vol. 51, (20) 4540-4546.

One-step solvothermal synthesis of a carbon @TiO2 dyade structure effectively promoting visible-light photocatalysis.

Material derived from hydrothermal carbonization: Effects on plant growth and arbuscular mycorrhiza.

Hydrothermal synthesis of imidazole functionalized carbon spheres and their application in catalysis.

Engineering carbon materials from the hydrothermal carbonization process of biomass.

Opportunities for Technological Transformations: from Climate Change to Climate Management?.

Coal from carbohydrates: The chimie douce of carbon.

Carbon dioxide capture on amine-rich carbonaceous materials derived from glucose.

Porous carbohydrate-based materials via hard templating.
Kubo S, Demir-Cakan R, Zhao L, White RJ and Titirici MM. Chemsuschem vol. 3, (2) 188-194.

One-step hydrothermal synthesis of nitrogen-doped nanocarbons: Albumine directing the carbonization of glucose.

Chemistry and materials options of sustainable carbon materials made by hydrothermal carbonization.
Titirici MM and Antonietti M. Chemical Society Reviews vol. 39, (1) 103-116.

2009

Naturally inspired nitrogen doped porous carbon.

Thermo-responsive columns for HPLC: The effect of chromatographic support and polymer molecular weight on the performance of the columns.
Roohi F, Fatoglu Y and Titirici MM. Analytical Methods vol. 1, (1) 52-58.

PEGylated chromatography: Efficient bioseparation on silica monoliths grafted with smart biocompatible polymers.
Tan I, Zarafshani Z, Lutz JF and Titirici MM. Acs Applied Materials and Interfaces vol. 1, (9) 1869-1872.

Structural characterization of hydrothermal carbon spheres by advanced solid-state MAS 13C NMR investigations.

Porous polymers: Enabling solutions for energy applications.

Carboxylate-rich carbonaceous materials via one-step hydrothermal carbonization of glucose in the presence of acrylic acid.
2008

**Hydrothermal carbon from biomass: A comparison of the local structure from poly- to monosaccharides and pentoses/hexoses.**

**Thermo-responsive monolithic materials.**

**Thin thermo-responsive polymer films onto the pore system of chromatographic beads via reversible addition-fragmentation chain transfer polymerization.**

**Hydrothermal carbon spheres containing silicon nanoparticles: Synthesis and lithium storage performance.**

**Selective partial hydrogenation of hydroxy aromatic derivatives with palladium nanoparticles supported on hydrophilic carbon.**

**Facile one-pot synthesis of mesoporous SnO2 microspheres via nanoparticles assembly and lithium storage properties.**

**Superior storage performance of a Si@SiOx/C nanocomposite as anode material for lithium-ion batteries.**

2007

**Back in the black: Hydrothermal carbonization of plant material as an efficient chemical process to treat the CO2 problem?.**

**A direct synthesis of mesoporous carbons with bicontinuous pore morphology from crude plant material by hydrothermal carbonization.**

**Aminated hydrophilic ordered mesoporous carbons.**
